DETAILED ACTION

1. Claims 20-32 are pending in the application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hughes et al (hereafter Hughes)(US Pat. 6,519,768) in view of Kuznetsov (US Pat 6,772,413).
4. **As to claim 20**, Hughes discloses an apparatus which operates between any platform types for translating machine instructions in source code into equivalent target instructions of a code of a target platform, wherein the source code differs from the code of the target platform (abstract), said apparatus comprising:
A processor (column 1, lines 7-10);
Storage means, wherein a source of binary translation templates residing in the storage means for mapping instructions in the source code into a set of instructions in the code of the target platform (abstract and column 1, lines 55-58);

A fill and analysis routing generator residing in the storage means arranges to be responsive to the templates for generating fill and analysis routines for identifying fillable positions in a template (Hughes discloses a system for analyzing templates for adding or removing functions, thus resulting in a set of binary templates used in the code translation process; column 2, line 66-column 3, line 65).

A dynamic binary translator residing in the storage means arranged to be responsive to the machine instructions (column 3, lines 42-53).

5. Hughes does not explicitly disclose parsing the template and for generating code to extract and deposit fields from the machine instruction in source code into a precompiled template. However, Kuznetsov discloses parsing the template and for generating code to extract and deposit fields from the machine instruction in source code into a precompiled template (column 15, lines 41-55).

6. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Hughes by utilizing template parsing, as taught by Kuznetsov in order to further break down the code, as parsing would further provide code that can be interpreted more easily.

Allowable Subject Matter

7. Claims 21-32 are allowed.

Response to Arguments

8. Applicant's argument with respect to claim 20 has been considered but is moot in view of the new ground(s) of rejection.
